

Creating DVD-R/Ws with Easy CD Creator 5

Select **Project Selector** in the **Roxio Easy CD Creator 5** folder from the **Start** menu.

Click **make a data CD**.

Click **dataDVD project**.

This will open up the project window.

The easiest way to transfer your files to the project window is to arrange the windows as shown and drag your files into the DVD file/folder pane as shown here.

Before creating the disc, you can name the DVD by clicking the randomly named title and typing in a new name as shown.

To create the CD, click the big red **Record** button.

You will be notified if your files are too large to be written to the disc.

After the DVD is finished, quit the program and answer no when asked if you want to save the project file.
